Coilover Suspension System

XK/R X100 & X150, XF, XFR and S-Type R

Spires' new Coilover Suspension System is designed to give you the choice of suspension character and ride height for your Jaguar. The system is cleverly engineered to be adjustable for ride height and uses Eibach's ERS springs, with an extensive range of spring rates and lengths available. We build the dampers, in passive form, with CATS where fitted and with new adaptive dynamics for 10 MY vehicles, to match the springs and therefore the character you require. In short, you can decide on comfort, a lowered ride height, sports driving or any combination in between.

All tunes deliver impressive road and track handling – flat, controlled, exciting and rewarding - combined with ease of use and a comfortable ride.
